ABBREVIATIONS OF NAMES OF SERIALS

This list gives the form of references used in MATHEMATICAL REVIEWS and the complete title. The place of publication, the date of the first journal issue reviewed by MR (if 1976 or later) and other pertinent information are given in parentheses when desirable for clarity. An asterisk (*) indicates that the journal has not previously been listed. A paragraph symbol (¶) indicates a bibliographic journal. A dagger (†) indicates a monographic series. This list reflects the change in Cyrillic transliteration by MATHEMATICAL REVIEWS. We cross-reference items from the pre-1983 transliteration.

Starting in 1983, MR will use the Cyrillic transliteration in use by ANSI, LC, Zbl, ISI, and others. A table showing the details is at the end of the Author/Key Index.

TRANSLITERATION OF CYRILLIC

Starting with volume 14 № 23 (November 12, 1982) of Current Mathematical Publications (CMP) and with issue 83a (January 1983) of Mathematical Reviews (MR), these publications and the American Mathematical Society will use the new system for transliteration (romanization) of Cyrillic given below.

Any transliteration scheme used in the work of MR must be one-to-one: the Cyrillic characters should be treated in a uniform way, independent of the language in which they occur, and it has to be possible to reconstruct the original Cyrillic from the transliterated version. The transliteration system used in MR before the change is (almost) one-to-one (and could easily be made one-to-one); it is optimal for the needs of Slavic languages that use Cyrillic alphabets, independent of any other language, and hence eminently suited for use in an international journal like MR. The new system below is largely in agreement with other transliteration systems in use in the U.S.A., such as those of the American National Standards Institute (ANSI), the U.S. Library of Congress (LC), and the Institute for Scientific Information (ISI). The principal feature of these systems is that they are intended to be as phonetic as possible for speakers of English. (It turns out that the transliteration of consonants is quite phonetic, except for the Cyrillic x which is rendered kh. Truly phonetic (English-oriented) transliteration of vowels is more or less impossible.)

To all those readers who have come to love the present "Slavic style" transliteration, the editors of MR apologize for the inconvenience. In particular, Associate Editors S. Ivanov and S. Zdravkovska are not in favor of the change.

The table below lists all Cyrillic letters occurring in Slavic languages, and the transliteration schemes used by:

Mathematical Reviews (= MR) (new), Zentralblatt für Mathematik (= Zbl), (new)

MR and Zbl (old),

American National Standards Institute (= ANSI),

U. S. Library of Congress (= LC),

Institute for Scientific Information (= ISI).

The transliteration of the British Standards Institute (= BSI) agrees with that of ISI, except for the letters \ddot{e} and $\ddot{n} \mapsto \ddot{1}$.

In the schemes of some of these enterprises, a few Cyrillic letters receive more than one transliteration, depending on the language in which the letter occurs. Non-Russian Cyrillic letters and transliterations different from the one for Russian are identified by superscript numbers:

1	Ukrainian	2	Belorussian	
3	Serbian	4	Macedonian	
-	D 1 .			

5 Bulgarian.

In order to achieve complete reversibility of the transliteration scheme, centered dots will be used as a separating or bracketing device, in the following cases:

TC \mapsto t·s, TIII \mapsto t·sh, III \mapsto sh·ch, ыу \mapsto y·u, ыа \mapsto y·a, дј \mapsto d·j, дј \mapsto l·j, нј \mapsto n·j, for separation, and $u\mapsto$ dzh· for bracketing.

Alphabetization (in indexes, etc.) will take place following the "stripped" version (i.e., without diacritical marks) of the transliteration; the symbol " (double prime) representing b, will be kept in the stripped version and placed at the head of the alphabet (the single prime representing b will be ignored). The capital version of the Bulgarian " is distinguished by an underbar: ".

Author Institution Codes and Addresses

Starting in 1983, some items in Current Mathematical Publications and then in MR will include an author institution address code. It is not feasible to code all institutions, and the code will be assigned only for articles which have an author address coinciding with one of the institutions we have coded. A revised list is planned for the 1983 annual index.
